

NICO DRONA NANOBUBBLE SYSTEM ADVANCED OPTIMIZATION FOR ANAEROBIC DIGESTION & BIOGAS ENHANCEMENT

Anaerobic digestion systems often face challenges such as slow microbial activity, long retention times, inconsistent gas quality, and hydrogen sulfide (H₂S) buildup. The **NICO DRONA Nanobubble System** delivers a next-generation solution by enhancing gas transfer, accelerating organic breakdown, and optimizing microbial performance for improved biogas yield and quality.

Challenges In Anaerobic Digestion Systems

Despite existing infrastructure, inefficiencies remain:

Low Gas Transfer Efficiency

Inefficient nutrient and gas availability slows microbial activity

Extended Retention Time

Longer digestion cycles reduce system throughput

H₂S Formation

Causes corrosion, odor issues, and lowers biogas quality

Incomplete Hydrolysis

Slower breakdown of complex organic matter

Odor & Digestate Issues

Accumulation of volatile compounds impacts environmental compliance

Key Benefits

Delivering measurable improvements across digestion systems:

Enhanced Digestion Performance & Stability

Faster breakdown with improved process consistency

Optimized Biogas Quality & Yield

Higher methane output with reduced contaminants

Effective Odor & H₂S Control

Improved environmental management

Improved Effluent Quality

Better water quality with reduced organic load

Reduced Retention Time

Increased throughput and operational efficiency

Why NICO DRONA?

NICO DRONA is engineered to enhance anaerobic digestion performance through advanced nanobubble technology:

Enhances gas-liquid interaction with ultra-fine nanobubbles

Accelerates hydrolysis and microbial activity

Improves methane yield and biogas quality

Reduces H₂S concentration and odor formation

Integrates seamlessly into existing digester systems

Key Application Areas

Engineered for industrial and municipal systems to maximize efficiency and biogas output:

Anaerobic Digester Performance Enhancement

Improves microbial activity and digestion stability

Digestate Lagoon Odor Control

Minimizes foul odors and improves handling

H₂S Reduction (Digester & Gas Line)

Reduces corrosion and improves gas quality

Biogas Upgrading

Improves methane purity and energy value

Hydrolysis Acceleration

Enhances breakdown of complex organic substrates

Effluent Treatment

Enhances pollutant removal and discharge quality

ISO Certified Quality Standards

Global Presence

Customizable, Application-Specific Solution

Enhance Digester Efficiency with Advanced Nanobubble Technology.
