

NICO DRONA NANOBUBBLE SYSTEM PRECISION OXYGENATION FOR ETHANOL PRODUCTION & FERMENTATION SYSTEMS

Ethanol production demands consistent fermentation performance, efficient water management, and optimized process control. The **NICO DRONA Nanobubble System** is engineered to enhance oxygen transfer, improve fermentation efficiency, and optimize wastewater treatment, delivering higher yields and more sustainable plant operations.

Challenges In Ethanol Production Systems

Ethanol plants commonly face critical operational challenges:

Limited Oxygen Transfer

Restricts yeast activity and fermentation efficiency

Inconsistent Fermentation Performance

Leads to yield variability and unstable batch output

High COD in Spent Wash

Increases load on wastewater treatment systems

Energy-Intensive Aeration

Drives up operational costs with low gas efficiency

Low Water Reuse Efficiency

Results in high freshwater consumption

Why NICO DRONA?

NICO DRONA is purpose-built for ethanol plants, delivering advanced performance through nanobubble technology:

Enhances oxygen availability during yeast propagation

Improves fermentation stability and batch consistency

Boosts biological oxidation and COD reduction

Reduces aeration energy and chemical dependency

Seamlessly integrates into fermentation, ETP, and reuse systems

Measured Performance Improvements

Delivering quantifiable impact across ethanol operations:

Fermentation Performance

- 3–8% increase in ethanol yield
- 10–20% reduction in fermentation cycle time
- Improved batch consistency and throughput

Water & Resource Optimization

- 30–60% increase in water reuse potential
- Up to 40% reduction in freshwater intake
- Reduced chemical consumption and sludge generation

Wastewater Treatment Efficiency

- 20–40% COD reduction (oxidative stage)
- 30–50% reduction in aeration energy consumption
- Reduced hydraulic retention time (HRT)

Key Application Areas

Designed to optimize performance across ethanol production systems:

Fermentation Enhancement

Improves oxygen transfer for higher yield and faster cycles

Process Water Reuse

Improves water quality for recycling within the plant

Yeast Propagation Optimization

Enhances microbial health and stress tolerance

Biofilm & Pipeline Control

Prevents fouling and maintains system hygiene

Wastewater Treatment (ETP)

Boosts COD breakdown and treatment efficiency

Oxidation & Disinfection

Supports chemical-free or reduced-chemical treatment processes

ISO Certified Quality Standards

Global Presence

Customizable, Application-Specific Solution

Enhance Ethanol Production with Advanced Nanobubble Oxygenation
