

NICO DRONA NANOBUBBLE SYSTEM PRECISION GAS-LIQUID OPTIMIZATION FOR OIL & GAS WATER SYSTEMS

Oil & gas operations demand efficient, reliable, and scalable water treatment across complex process environments. The **NICO DRONA Nanobubble System** is engineered to enhance gas-liquid interaction, improving water quality, optimizing treatment efficiency, and delivering stable, high-performance outcomes across upstream and downstream operations.

Challenges In Oil & Gas Water Systems

Managing process and produced water presents critical challenges:

Poor Gas-Liquid Interaction

Limits oxidation, separation, and treatment efficiency

High Sulfide & Odor Levels

Creates safety risks and corrosion issues

Chemical-Intensive Treatment

Increases operational cost and environmental impact

Sludge & Contaminant Accumulation

Reduces system efficiency and increases maintenance

Biofilm & Pipeline Fouling

Impacts flow assurance and operational reliability

Key Benefits

Delivering measurable improvements across water and process systems:

Enhanced Treatment Efficiency

Improved oxidation, flotation, and separation performance

Reduced Chemical Usage

Lowers dependency on chemical additives and oxidants

Improved Water Quality

Cleaner water with reduced contaminants and odors

Operational Stability

Reliable performance across varying process conditions

Seamless Integration

Compatible with existing infrastructure and systems

Why NICO DRONA?

NICO DRONA is purpose-built for oil & gas environments, delivering advanced performance through nanobubble technology:

Enhances oxidation and hydrocarbon separation efficiency

Reduces hydrogen sulfide (H₂S) and associated odors

Improves microbial balance for biological treatment processes

Minimizes chemical dependency and sludge formation

Seamlessly integrates into existing water and process systems

Key Application Areas

Designed to optimize water systems across oil & gas operations:

Produced Water Treatment

Improves oxidation, separation, and reuse potential

Sulfide & Odor Control

Reduces H₂S levels and improves operational safety

Refinery Wastewater Optimization

Enhances contaminant breakdown and effluent quality

Pipeline Cleaning & Biofilm Control

Prevents buildup and maintains system efficiency

Sludge & Drilling Mud Treatment

Accelerates degradation and stabilizes waste streams

Enhanced Oil Recovery (EOR) Support

Improves water quality for advanced recovery processes

ISO Certified Quality Standards

Global Presence

Customizable, Application-Specific Solution

Optimize Oil & Gas Water Systems with Advanced Nanobubble Technology.
