

NICO VANTA NANOBUBBLE SYSTEM PRECISION OXYGENATION FOR ULTRAPURE WATER ENVIRONMENTS

Ultra-pure water (UPW) systems demand the highest levels of control, consistency, and contamination-free performance. The **NICO VANTA Nanobubble System** is engineered to deliver precise, chemical-free oxygenation, enhancing water purity, improving process stability, and ensuring consistent high-performance output across sensitive, high-spec applications.

Challenges In Ultra-Pure Water Systems

Maintaining ultra-pure environments presents critical challenges:

Dissolved Gas Instability

Fluctuating oxygen levels impact process consistency

Micro-Contaminants & Residues

Even trace impurities affect high-precision applications

Inconsistent Cleaning Performance

Limits efficiency in precision manufacturing environments

System Compatibility Constraints

Many technologies disrupt UPW integrity or resistivity

Chemical Dependency

Conventional oxidation relies on additives that risk contamination

Key Benefits

Delivering measurable improvements across UPW systems:

Controlled & Pure Oxygenation

Precise dissolved oxygen control with zero contamination

Chemical-Free Processing

Reduces reliance on chemical oxidants and additives

Enhanced Cleaning Performance

Superior micro-surface cleaning for precision applications

Stable System Integration

Compatible with existing DI and UPW infrastructure

Improved Process Reliability

Consistent performance in critical environments

Why NICO VANTA?

NICO VANTA is purpose-built for ultra-pure water systems, delivering unmatched precision and purity:

Controlled & Pure Oxygenation

Enables precise dissolved oxygen control without ionic impurities.

Enhanced Cleaning Efficiency

Improves removal of micro-particles and contaminants.

Chemical-Free Processing

Reduces or eliminates the need for chemical additives.

Improved Process Stability

Ensures consistent performance in high-precision environments.

Ultra-High Purity Maintenance

Preserves the integrity of sensitive UPW systems.

Key Application Areas

Semiconductor Wafer Cleaning & Rinse Optimization

Enhances particle removal and surface cleanliness

Cleanroom Applications (Chemical-Free)

Supports contamination-free cleaning processes

Demineralized (DI) Water Polishing

Improves stability and consistency of high-purity water

Precision Optics & Instrumentation Cleaning

Maintains clarity and surface integrity

Microelectronics Surface Cleaning

Enables residue-free cleaning of sensitive components

Advanced Oxidation (No Chemical Residue)

Enables oxidation without introducing contaminants

ISO Certified Quality Standards

Global Presence

Customizable, Application-Specific Solution

Achieve Ultra-Pure Water Performance with Precision Nanobubble Oxygenation
